WORK EXPERIENCE

Become Consulting | *Software Engineer* April 2025 – Present

Java, Spring Boot, JavaScript, Node.js/Express, LangChain, AWS, Docker, SQL, React, Typescript, Claude

- Engineered full stack Express.js AI Agent with LangChain, RAG, Claude SDK and Supabase to power semantic candidate search and recommendation feed across 50,000+ profiles, improving monthly candidate matching throughput by 3x.
- Architected a scalable, multithreaded Spring Boot backend exposing developer-focused REST APIs and reusable components for candidate profile related CRUD, AI dependencies and LangSmith evaluation, handling 100 rps peak API throughput.
- Owned development of distributed, event-driven profile ingestion pipeline using Java (Spring Boot), AWS S3, and SQS/Lambda to automate resume and feedback parsing into SQL, reducing profile creation and updating time by 80%.
- Containerized and refactored Spring Boot services into reusable Java SDK with standardized APIs for minimal integration, built docker templates and CI/CD pipelines for AWS ECS, accelerating new-hire onboarding time by 10-15 hours.
- Developed React + Typescript + MaterialUI interfaces in an Agile/Scrum environment, delivering 10 new responsive AI-powered candidate search, profile management, and workflow features, enhancing productivity and UX for 100+ analysts.

Epic Systems | *Solutions Engineer* Sep 2024 – Mar 2025

Python, SQL, Java, Spring Boot, MUMPS, Kafka, JavaScript, React, Microsoft Copilot

- Led 10 + weekly meetings coordinating with product, client and engineering teams to build backend platforms, troubleshoot distributed services, and optimize APIs across Spring Boot, JavaScript, SQL, MUMPS and cloud infrastructure.
- Built automated Python/SQL data validation pipelines against 10+ Reporting DB and Data Warehouse tables following nightly ETL, validating diagnosis and drug codes for HIPAA compliance, and accelerated ETL failure/error detection by 4 hours.
- Engineered an internal billing 'Copilot' by wiring Epic's internal AI SDK with Spring Boot, JavaScript/React, and SQL to automate billing claim generation, enabling re-usable workflow templates and improving coding efficiency by 200%.
- Designed event-driven Spring Boot/Kafka services for healthcare transactions with retries and DLQs, debugging distributed data flows across APIs, SQL and frontend services to unblock and restore 500+ billing statements during go-live.

ROX Motors | *Software Engineer Intern* Mar 2024 – Jul 2024

Java, Spring Boot, AWS (SQS, Lambda), Docker, Kubernetes, PostgreSQL, Kotlin, Jetpack-compose

- Owned end-to-end development of ROX's android marketplace backend with checkout, inventory, and product catalog APIs, enabling 50+ designers and product managers to manage products and process $10K+ worth of transactions per week.
- Created payment integration with Alipay and Stripe APIs, using PostgreSQL database for client sessions, cloud-based edge functions and webhooks to listen for payment events, and SQS/Lambda to handle long-running checkout sessions.
- Migrated 5 production Java Services from VMs to Kubernetes using Docker/Helm, slashed release time from hours to minutes and eliminated deployment failures; containerized 9 additional services to streamline future migrations.

PROJECTS

Penn Ball 2 | Github | *Python, React, FastAPI, Scikit-learn, PostgreSQL, Railway/Vercel, Claude API* Feb 2026

- ML-powered NBA injury analytics platform with injury simulator and Claude-grounded scenario chat, trained HistGradientBoosting models to predict how teammate absences redistribute points, assists, and minutes.

Penn Ball | Github | *Python, React, NodeJS, MySQL, AWS RDS, Typescript, BeautifulSoup, Cursor/Copilot* May 2024

- Cloud-based Basketball analytics platform with 100,000+ records from official NBA/NCAA database, built ETL data pipelines to extract team, player and game statistics, enabling users to perform complex queries on player/team performances.

EDUCATION

University of Pennsylvania – Philadelphia, PA **May 2024**

Double Major in Computational Physics and Mechanical Engineering *Minor: Computer Science*

Relevant Coursework: Data Structures and Algorithms (Java), Object Oriented Programing (Java), Database and Information Systems, Ruby on Rails, C++, Linear Algebra, Computational Physics (Python), Statistical Mechanics (Python)

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, Typescript, SQL, HTML/CSS, Ruby, C++, Mumps

Tools: React, Node.js, Express.js, Spring Boot, FastAPI, MySQL/PostgreSQL, MaterialUI, MongoDB, Redis, AWS (SQS, S3, Lambda, RDS, ECS), BeautifulSoup, Git/Github, Docker, Kubernetes, Supabase, LangChain, OpenAI SDK, Cursor, Kafka
